Richard Remigoso

## I. Group Activity Log

Time/ Location	Activity	Achieved/ To-Do	Member(s)
Tuesday (2/19/19) 6:00 PM - 8:00 PM @ Library 2 <sup>nd</sup> floor	In-person group meeting	Done: <ul style="list-style-type: none"><li>- Outlined decoder algorithm</li><li>- Python installation</li><li>- PRPG selection discussion</li></ul> To-do: <ul style="list-style-type: none"><li>- Fix chosen project 1 for incorrect hexadecimal</li></ul>	Richard, Syed
Wednesday (2/20/19) 6:00 PM - 9:15 PM @ Library 2 <sup>nd</sup> floor	Test case 1A milestone	Done: <ul style="list-style-type: none"><li>- Added 1 function for two's comp</li><li>- Instruction conversions for branches</li><li>- Passed testcase 1A</li></ul> To-do: <ul style="list-style-type: none"><li>- Continue to work on logic instructions testcase 2A</li></ul>	Richard, Syed
Friday (2/22/19) 6:00 PM - 2:00 AM @ Library 2 <sup>nd</sup> floor	Test case 2A milestone	Done: <ul style="list-style-type: none"><li>- Passed testcase 2A</li><li>- Python code for srl</li><li>- Fix bugs from previous instructions</li></ul> To-do: <ul style="list-style-type: none"><li>- Fix potential srl functionality</li><li>- Move to testcase 3A</li></ul>	Richard, Syed

Monday (2/25/19) 6:00 PM - 12:00 PM @ CS Lounge	Test case 3A milestone	Done: <ul style="list-style-type: none"> <li>- Passed testcase 3A</li> <li>- Implemented printing function to output file</li> <li>- Added sw and lw</li> </ul> To-do: <ul style="list-style-type: none"> <li>- Move to testcase 4A</li> </ul>	Richard, Syed
Wednesday (2/27/19) 6:00 PM - 10:30 PM @ CS Lounge	Test case 4A milestone	Done: <ul style="list-style-type: none"> <li>- Passed testcase 4A</li> </ul> To-do: <ul style="list-style-type: none"> <li>- Fix sll instruction in Python</li> <li>- Get Project 1 hamming weight and distance to work</li> </ul>	Richard, Syed, Rami
Wednesday (2/27/19) 6:00 PM - 3:30 AM @ CS Lounge	PRPG, Hamming weight, and Hamming distance integration	Done: To-do: <ul style="list-style-type: none"> <li>- Fix sll instruction in Python</li> </ul>	Richard, Syed
Thursday (2/28/19) 6:00 PM - 11:59 PM @ CS Lounge	Finish the project, clean source folders, create testcase #Bs, write lab reports	Done: <ul style="list-style-type: none"> <li>- Fixed sll instruction</li> <li>- Successfully ran PRPG, Hamming weight, and Hamming distance</li> <li>- Created testcase #Bs</li> <li>- Submitted!</li> </ul> To-do: <ul style="list-style-type: none"> <li>- N/A</li> </ul>	Richard, Syed

Team Members: Richard, Syed, Rami

## II. Personal Activity Log

<b>Time/ Location</b>	<b>Activity</b>	<b>Achieved/ To-Do</b>	<b>Member(s)</b>
Sunday (2/24/19) 4:00 PM - 5:00 PM @ Home	Bug fixing	Done: - Fixed srl functionality To-do: - Make a printing function	Richard
Tuesday (2/26/19) 1:30 PM - 2:30 PM @ Home	Adding instructions to python	Done: - Accommodated lw and sw for output file To-do: - Test the decoder using Project 1 code	Richard
Tuesday (2/26/19) 6:00 PM - 3:00 AM @ CS Lounge	Debugging	Done: - Fixed debugging issues - Ran PRPG program successfully To-do: - Test the decoder using Project 1 code part 2	Richard

### III. Test Case Screenshots

3.

a.

The image shows a screenshot of the Atom text editor interface. At the top, the title bar reads "output.txt — C:\Users\sjkbo\Desktop\Project2 — Atom". Below the title bar is a menu bar with "File", "Edit", "View", "Selection", "Find", "Packages", and "Help". The main editor area is divided into two panes. The left pane shows a project tree with "Project2" expanded, containing files "Decoder.py", "hex.txt", and "output.txt". The right pane shows the content of "hex.txt", which is MIPS assembly code. The code is as follows:

```
1 0 addi $8, $0, 32
2 4 ori $9, $0, 43981
3 8 sll $9, $9, 16
4 12 ori $9, $9, 61202
5 16 addi $10, $0, 1
6 20 addu $11, $0, $0
7 24 and $12, $9, $10
8 28 beq $12, $0, 1
9 32 addi $11, $11, 1
10 36 srl $9, $9, 1
11 40 addi $8, $8, -1
12 44 bne $8, $0, -6
13 48 beq $0, $0, -1
```

The bottom status bar shows the file path "PS C:\Users\sjkbo\Desktop\Project2\" and the time "14:1".

b.

The image shows a screenshot of the Atonm IDE interface. On the left is a project explorer showing a folder named 'Project2' containing three files: 'Decoder.py', 'hex.txt', and 'output.txt'. The main editor area is divided into three tabs: 'Decoder.py', 'hex.txt', and 'output.txt'. The 'Decoder.py' tab is active, displaying assembly code with line numbers 1 through 12. The code includes instructions like 'addi', 'sub', 'bne', and 'beq' with various register and immediate values. The 'hex.txt' tab is empty. The 'output.txt' tab displays the results of the assembly process, including 'Registers after beq', 'Register Contents', a 'Memory Array' (a long list of zeros), and the 'Total instructions count: 127'. The PC value is shown as 'PC: 40 beq \$0, \$0, -1'.

#### IV. PRPG

Q1.

Our project should be able to achieve all of the project's requirements. We chose my PRPG algorithm, which was using the project 1 PRPG. We used mine because I had the fastest ALU, and we did not have enough time to try new algorithms.

Q2.

We verified the correctness of our simulator by running MARS side by side and comparing the results. We mainly used Google search for binary, hex, and decimal calculators. One of the main bugs we found was that Python does not really care how big the number can be whereas MARS can only handle up to 32 bits.
